anything we can try to get the door open If you wish to DIY, then you will need to obtain a service manual, in order to perform the troubleshooting steps, just to ensure that the main board is actually the culprit, and also to enable the parts to be obtained, via the parts numbers in the manual. Then at the least you will be appraised of the problem and the potential costings. Then at the least you can make up your mind as to repair or replace If you look closely at the washer at the bottom you will see a groove. That groove is where that spring will need to end up otherwise the whole thing will keep popping off. I work the edge of the seal with the metal ring and making sure it lines up with the groove. Once you get that completed I push down on the spring to make sure that it is in there. If it is not it takes one door opening to make it fall all apart and you have to start over. There is a manual release button you can pull. Answer questions, earn points and help others. That page can't be found. It looks like nothing was found at this location.
