With digital controls and power tracking capabilities, the CPXH Series makes consistent and precise 40kHz cleaning programmable and easy to use for any technician. It allows technicians to program and lock in cleaning settings. It not only helps reduce operation errors, but it also allows for autonomous operation after programming. It powers down the unit after a cycle is complete and no keys are pressed within 15 minutes. One touch to the keypad and the unit wakes. Through ultrasonic power tracking and advanced technology, self adaptive technology automatically adjusts to changes within the tank, giving you steadfast cavitation. It's smart, innovative cleaning that adapts to deliver seamless results you can trust. We've extended the degas time periods up to 99 minutes to allow for processing such as cell disruption, mixing, dissolving solids into liquids and much more. It can also be set for time; up to 99 minutes, or continuous operation. Connect to a qualified service provider using LabX Service. Use our directory to find and contact a service specialist. Automatic rotor recognition, electronic imbalance detection, onefinger lid closure, soft brake function. Automatic rotor recognition, rotor recognition, electronic imbalance detection, safety lid lock. Biopharma industrial scale cell harvesting, broth clarification and separation of cell debris, separator can be a closed sanitized system, separates particles to 0.1 micron Be sure to use this value in calculating the rpms required for each rotor. Here are a few important guidelines for operating a centrifuge. These can help prevent damage to the centrifuge and rotor and more importantly prevent possible serious injury to you and others. Use the correct rotor and make sure it is properly installed. Make sure your work surface is level and firm. A centrifuge should never be in operation on an uneven work surface. Balance the load in a rotor. If it is an identical liquid that you are balancing against, then volume will work just fine. Stop or unplug a centrifuge if you see excessive shaking. Check to see if your tubes are balanced and that work surface is level. If that's not the problem, schedule a service call. Don't move or bump the centrifuge while it is spinning. Make sure the centrifuge is in a location where this cannot accidentally happen. Don't open the lid to a centrifuge while it is spinning. Wear safety goggles if you are working near an operational centrifuge. Use the appropriate sample tubes for your rotor. Make sure your tubes are rated to be able to handle the max rcf of your rotor. Special tubes are needed for high force centrifugation. Limited. Yes. Process Grams to kilograms of purified compound. No. Proteins. Peptides. Sugars. No Reaction Speed. Standard. Detection. CCD camera. Scanning Photomultiplier Tube PMT. Channel Photomultiplier CPM Fluorescence. Photodiodes. Excitation Source. Tungsten Halogen Lamp Detects 110 copies of target sequence. Lid Design.

CPX952119R Brand New Item Branson CPX1800 0.5 Gal. Benchtop Ultrasonic. CPX952119R. Bransonic CPX ultrasonic baths feature digital controls with power tracking capabilities to adjust for light or heavy loads. Ultrasonic power tracking The new CPX Series Bransonic control circuitry actively tracks the operating frequency of the bath and immediately brings the tank's frequency back to its optimum point. What this means to the end user is that the CPX Series Bransonic bath will always deliver the same ultrasonic power without depending on the operator to make adjustments. The new CPX Series Bransonic delivers unwavering cavitation.

Steady activity in the bath, even when the load conditions change. Degassing and conditioning the solution The CPX degassing period can be set up to 99 minutes. Extended degas time periods allow for "beyond cleaning" applications such as sample preparation. Which includes degassing liquids, mixing and homogenization, dissolving solids, cell lysing, and dispersion of particles. The CPX unit allows the user to lower the amplitude of the acoustic energy in the bath 100% power to the tank for normal applications, 70% power for delicate applications. Manipulating the output waveform in this manner greatly helps to avoid damage to the components in the bath during the ultrasonic process. Sleep mode An energysaving green feature. When the cycle is complete and no control keys are touched for 15 minutes. The CPX unit goes into sleep mode. Touching any key on the controller causes the unit to come back on. Convenient builtin pour drains are featured on .5 and .75 gallon models. Tank drains with valves are CPX952317R. Bransonic M and MH Series ultrasonic cleaners are known for offering a level of precision and reliability you have come to expect from Branson. Warranty; Comes with 2 Years Manufacturers Warranty TO OUR CUSTOMERS.
