With this manual book, you will be able to gain a lot of information related to the Canon PowerShot A460 camera product. But, before directly jumping in to the Canon PowerShot A460 Manual, it will be better to talk about the specification first. And to begin the talk about it, the overall look of this product will be a good start. Canon PowerShot A460 Overall Look As the part of Canon PowerShot A460 Manual, look seems to be the main concern of Canon. And in this product, it seems like Canon has a little bit lost in this principle. Big and heavy, that is the first thing to notice when the first time using Canon PowerShot A460. It is more convenience to use tripod with it. The body of Canon PowerShot A460 is rounded and wellconstructed with high quality material with rubberized layer on some parts. Even it is not priced much, Canon PowerShot A460 brings expensive look.

Plastic can be found in most body case, thanks to its brushed metal on the front plate for making this camera more refining. Moreover, the chrome band around the left side of camera gives appealing accent. At glance, the A460 looks like a small brick, but it is quite functional. Unlike other Aseries

which are built in more grandlooking, this camera will be easier to hold in most hand after shooting. Of course it offers high simplicity and more safety grip. The Canon PowerShot A460 manual says that body dimension of this camera is about 106 x 52 x 40 mm with 215 gram of overall weight. Looking from the appearance and shape, this device won't give you a problem even for daily usage. The Specification of Canon PowerShot A460 It is Canon, a trusted manufacturer behind the Canon PowerShot A460. Not only focusing on DSLR development, the Canon Incorporation is also paying serious attention on this industry. This product is the sibling of the A410, A420, A430. Even they look very similar, but these cameras bring different feature and software. Find out more about this product as explained below. The image and video will be recording precisely by 4.8 x 3.6 m CCD Optical Sensor. Having 5 million effective pixels, the user has opportunity to get superfine image quality at 2592 x 1944. For different kind of photography, recording 480p AVI video is also a must to try. Optic and focus play crucial role for the camera. Canon PowerShot A460 manual tells that for this reason, builtin lens with 4x zoom is equipped on this camera. Unsupported autofocus module will be paid off by its highfeatured autofocus. Canon PowerShot A460 featured wider LCD Display than its predecessors with 2 inches wide. Having 86.000 active dots inside, this panel shows brilliant graphic quality like you are expected. Your data will be saved safely in SD or SDHC card. For connectivity, the only USB 1.0 will run the data transferring responsively.

Last but not least, 2 x AA NiMH batteries are required to supply the energy for this camera. Having pocketable size combining with responsive performance, no doubt that this cool camera gets its popularity all around the globe.The A460 is priced starting from 150 USD, the price might be different in some places due to several factors. Price At introduction Links Accessories Canon is wellknown for its highquality optics, technical innovations, and aggressive product development. The 3.2megapixel Canon A410 is the latest in Canons A Series for AA battery models.Keep reading to find out more! Canons proprietary DIGIC II imaging processor reduces power consumption by about 35 percent while enhancing image definition, color vibrancy and quality. Operations are quick, too, including startup, autofocus, shutter response, playback and USB transfer. Lower resolutions are also available, including an emailfriendly size. The A410s allplastic, twotoned silver body is lightweight and compact, although just a little too large for the average shirt pocket. Still, the A410 should easily fit into larger coat pockets and purses, and comes with a wrist strap for more security while shooting. Like many Canon digital cameras, the A410 features a shutterlike lens cover and a retracting lens that keeps the camera front fairly smooth when the camera is powered off. Without a

lens cap to keep track of, the A410 is quick on the draw you just have to wait a couple of seconds for the lens to extend forward before you can shoot. The A410 uses Canons AiAF Artificial Intelligence Auto Focus system, which judges focus based on a fivepoint area in the center of the frame. Whatever portion of the subject is closest to one of the AF points is what determines the overall focus. You can alternately choose to base focus on the center of the frame only. A bright orange AF Assist Beam on the front panel helps the camera focus in dark shooting conditions, and can be deactivated if necessary. In addition to the optical zoom, the A410 also offers as much as 3.2x digital zoom.

However, I always remind readers that digital zoom invariably decreases the overall image quality because it simply enlarges the center pixels of the CCD image. The Canon A410 has both a realimage optical viewfinder and 1.5inch LCD monitor for composing images. The LCD monitors information display includes some exposure information. Main exposure modes are accessed by turning the Mode dial on top of the camera. The LCD menu system provides access to options within each mode. Shooting in Auto mode puts the camera in charge of everything except the Flash and Macro modes. Manual mode allows you to select some settings yourself, including exposure compensation, white balance, photo effect, metering method, ISO. It also accesses Stitch Assist mode for panoramic shots. Three Movie modes are available on the PowerShot A410 Standard, Compact for emailing and My Colors. Night Snapshot captures people against twilight or night backgrounds, this mode also reduces the effects of camera shake even without using a tripod. Indoor prevents camera shake while capturing natural color under fluorescent or tungsten lighting. Foliage allows vivid capture of new growth, autumn leaves or blossoms. Snow avoids the blue tinge and underexposure of people against a snowy background. Beach avoids underexposing people near water or sand where reflected sunlight is strong. Fireworks optimizes camera settings to capture fireworks displays. The StitchAssist mode is Canons answer to panorama shooting, in which multiple, overlapping images can be captured horizontally or vertically on the A410. Movie mode offers three capture modes of up to three minutes of video with digital zoom but no audio capture. Standard captures 640 x 480 images at 10 frames per second or 320 x 240 at 20 fps. Compact captures 160 x 120 at 15 fps for emailing. My Colors captures 640 x 480 at 10 frames per second or 320 x 240 at 20 fps. Theres also a Custom setting to manually set color balance based on a white or gray card.

The PowerShot A410s ISO adjustment offers 50, 100, and 200 ISO equivalents, as well as an Auto setting. By default, the A410 uses an Evaluative metering mode, which links the metering area to the focus area when AiAF is activated. Also available is a Spot Metering option, which bases the exposure on the center of the subject, and CenterWeighted, for a larger area in the center of the frame. The A410s flash operates in either Auto, Forced, Suppressed, or Slow Synchro in Night Portrait mode only modes, with an available RedEye Reduction option for both Auto and Forced. A Low Sharpening option softens the image. Continuous Shooting mode works like a motor drive on a 35mm camera, capturing a rapid burst of images for as long as the Shutter button is held down or until the memory card runs out of space. Actual frame rates will vary depending on the image size and quality selected. The Canon A410 also features a selftimer, which delays the shutter for anywhere from one to 10 seconds after the Shutter button is pressed, letting you run around and jump into the shot. You can manually set the delay interval, or select two or 10second modes. Timer mode lets you set a delay ranging from 1 to 10 seconds, after which the camera will capture anywhere from 1 to 10 shots. Great for group pictures, making sure you get one with nobody blinking.. I highly recommend purchasing a largercapacity card right away, given the A410s maximum 2,048 x 1,536pixel resolution. The camera uses two AAsized batteries for power, either alkaline or NiMH type. Two alkaline batteries come with the camera, but I strongly advise picking up a couple of sets of rechargeable batteries and a charger, and keeping a spare set freshly charged at all times. The optional AC adapter might be useful for preserving battery power when reviewing and

downloading images, and plugs straight into a DC In jack on the side of the camera, but goodquality rechargeable batteries really eliminate the need for it.

The Canon A410 features a USB jack for quickly downloading images to a computer, and comes with a software CD loaded with Canon Digital Camera Solution Disk compatible with Macintosh and Windows systems. Additionally, an AV Out jack and the included video cable lets you connect the camera to a television set. The A410 is DPOF Digital Print Order Format compatible, with a range of print settings available through the Playback menu. The camera can also print directly to several of Canons accessory photo printers or other PictBridge printers. Its fully automatic mode keeps things simple, while the cameras Scene modes handle more complex shooting situations. Theres no audio capture or video output but the print options are extensive, covering Exif Print, PictBridge and Canons proprietary direct connect technologies. The 3.2megapixel CCD captures high quality images, able to make sharp prints as large as 8x10 inches, while maintaining very good detail. The compact yet rugged design should fit well into a larger coat pocket or purse, and the PowerShot A410s lens design protects it when closed, while keeping the camera body smooth and lowprofile. Measuring 4.1 x 2.0 x 1.6 inches 103 x 52 x 40 millimeters, the A410 wont slip into your shirt pocket. It will, however, find its way into larger coat pockets, purses, and hip packs, good for travel. The A410 has good heft, with its 7.2ounce 204gram weight, with batteries and memory card, but isnt at all uncomfortable to carry. The PowerShot A410s twotoned silver body is sleek and understated, yet sophisticated enough for any crowd. Also on the front panel are the optical viewfinder window, flash, and a light emitter that serves multiple purposes, including autofocus assist, redeye reduction, and the selftimer countdown. Inside the compartment are the DC In and USB jacks. A Mode switch puts the camera into Playback or Record modes Auto, Manual, Scene or Movie, and is adjacent to the top right corner of the LCD monitor.

Below the Mode switch is a fourway multicontroller that navigates settings menus, pressing up, down, left, and right. The right edge also controls flash mode, while the left edge accesses Macro mode. The top edge also zooms in and the bottom edge zooms out for image composition in Record mode or image magnification in Playback mode. A Function Set button below left of the multicontroller confirms menu changes. Between the LCD and the multicontroller are the Display button and the Menu button below it. With the battery door located on the side of the camera, it does not interfere with quick battery or memory card changes while working with a tripod. This is something I always pay attention to, given the amount of studio shooting I do. Pick an exposure mode, press the Menu button to modify it, navigate to the setting and use the Function Set button to make the change. Combined with the instruction manual, the A410s user interface shouldnt take more than an hour to get comfortable with. Pressing the Display button cycles through the available display modes, including the image with information, no display at all, and the image only. Pressing the Display button once pulls up an enhanced information display, showing mode, EV, white balance, and flash settings but no histogram. A third press cancels the information overlay entirely. The telephoto side of the zoom toggle lets you zoom in on a portion of the image on the PowerShot A410, while the wideangle side backs you out again. The options are as follows In Record mode, the left arrow sets focus mode while the right arrow sets flash mode, and the up arrow zooms in while the down arrow zooms out. When an image has been enlarged, all four arrows pan within the view when the Function Set button has been pressed. Otherwise, the down arrow displays the singleimage erase menu. It also switches between available exposure adjustments in Manual mode. It also dismisses the menu screen and backs out of menu selections.

Manual, offers Manual, Super Macro, My Colors, and two Stitch Assist options. Movie offers Standard, Compact and My Colors. Options are Auto, Daylight, Cloudy, Tungsten, Fluorescent, Fluorescent H, and Custom manual setting. Still image resolutions are 2,048 x 1,536; 1,600 x 1,200; 1,024 x 768; and 640 x 480 pixels. Postcard mode also offers 1,600 x 1,200 pixel resolution but greys

out a portion of the screen top and bottom, showing the part of the image that wont fit on a standard 4x6 print. Quality options activated by pressing the Menu button are Superfine, Fine, and Normal. On a Macintosh computer, transfers are typically initiated after the camera is recognized by the operating system. The following exposure modes are available If on, the camera judges focus based on the subjects proximity to nine focus areas arrayed in the center of the image. If off, the camera bases focus on the very center of the frame. If on, the light automatically illuminates in dark shooting conditions. The traditional green Playback symbol denotes this mode on the Mode switch. Pressing the Menu button on the PowerShot A410 displays the following options Protected images cannot be deleted or manipulated, except through card formatting, which erases all files. If disabled, the camera continues numbering in sequence, regardless of memory card. English is the default setting. Just as important as an extra memory card is a tool to rescue your images when one of your cards fails at some point in the future. I get a lot of email from readers whove lost photos due to a corrupted memory card. Memory card corruption can happen with any card type and any camera manufacturer, nobodys immune. Given the amount of email Ive gotten on the topic, I now include this paragraph in all my digital camera reviews. The program you need is called PhotoRescue, by DataRescue SA. Read our review of it if youd like, but download the program now, so youll have it.

So download PhotoRescue for Windows or PhotoRescue for Mac while youre thinking of it. While youre at it, download the PDF manual and quickstart guide as well. Stash the file in a safe place and itll be there when you need it. Trust me, needing this is not a matter of if, but when. PhotoRescue is about the best and easiest tool for recovering digital photos Ive seen. Disclosure IR gets a small commission from sales of the product, but Id highly recommend the program even if we didnt. OK, now back to our regularly scheduled review. To see the full set of our test images, with explanations of what to look for in them, see the PowerShot A410 Sample Pictures page.Let your eyes be the ultimate judge. Visit our Comparometertm to compare images from the PowerShot A410 with those from other cameras you may be considering. The proof is in the pictures, so let your own eyes decide which you like best! Flash does not throttle down well at this range, so plan on using external flash for macro shots. Detail is strong and resolution high, with only a moderate amount of softening in the corners from the lens. Most cameras have some softening in the corners in macro mode. The flash doesnt throttle down well. Plan on using external lighting for your closest macro shots with the A410. The Canon A410s 0.54% barrel distortion at wide angle is lower than average among the cameras Ive tested. At the telephoto end, the A410s 0.0% distortion is very low indeed. The degree of softening was very slight though, much less than were accustomed to seeing on the digital cameras we test. Average exposure compensation required. Our test lighting for this shot is a mixture of 60 and 100 watt household incandescent bulb, a pretty yellow light source, but a very common one in typical home settings here in the US. Better than average exposure accuracy.

Shadow detail also tended to fall apart as in the trees of that same shot, but nothing that would raise an alarm for a consumer digicam like the PowerShot A410. Sunlit shots showed high contrast and oversaturation particularly in scene modes while overcast scenes managed a more accurate portrayal. Exposure accuracy overall was better than average, the camera requiring less exposure compensation than were accustomed to seeing with consumer digicams. Beware that while you might be able to make out what looks like distinct lines at numbers higher than those weve mentioned here, the camera is just doing its best to continue interpreting the lines. If you zoom in and follow them from the wider portions, youll see the lines converge and reappear several times, so the lines you see at 1,400 and higher are really only artifacts generated by the cameras imaging system. The A410 is relatively free of this. We were surprised by how acceptable the noise levels of the A410 were at ISO 200 We suspect that most consumers would be quite happy with even 8x10 inch prints made from the A410s ISO 200 shots, and at 5x7 inches, noise really becomes a nonissue. Pretty good lowlight performance, capable of capturing bright images under average city street lighting and slightly darker conditions. The shot above is designed to mimic the very harsh,

contrasty effect of direct noonday sunlight, a very tough challenge for most digital cameras. You can read details of this test here. More saturated colors are located towards the periphery of the graph. Hue changes as you travel around the center. Thus, hueaccurate, highly saturated colors appear as lines radiating from the center. This is simply because most people like their color a bit brighter than life. The PowerShot A410 follows this trend, although seemingly more so in Scene modes than in other exposure modes.

In its normal programmedauto exposure mode, the A410s color rendering is actually a bit more restrained than that of some of its competitors. Most colors are oversaturated, but none to any extreme. Some greens are close to neutral saturation, while strong yellows are slightly undersaturated. The bottom line is very pleasing pictures, bright and vibrant, without being too much so.Reds were captured accurately even in strong sunlight and muted outdoor scenes appeared natural as well. Even a handheld indoor shot with the flash suppressed in mixed lighting captured the scene surprisingly well. On the colorerror chart at right, hues are very accurate, the sole exception being the typical shift of cyans toward pure blues, a tweak that improves sky colors somewhat. Very good accuracy from the LCD monitor. However, the LCD monitor showed close to 100 percent frame accuracy. Its LCD viewfinder is excellent, but the A410 could really use a more accurate optical viewfinder. Our standard shots required more exposure compensation than average. The cameras SlowSync mode produced brighter results, but with a bit more color cast from the room lighting. The overall results with both modes were quite good, but wed like to have seen slightly less color cast from the room lighting. This agrees with Canons own flash range specs of 9.8 feet at wide angle and 6.6 feet at telephoto. The lens is zoomed out slightly even at the 8 foot distance, so a range of just under 8 feet would match Canons specs fairly well. This is a bit on the short side, but not uncommon for a compact camera model. ISO 400 images are very soft at 8x10, acceptable at 5x7, great at 4x6. Ultimately, theres no substitute for printing a lot of images and examining them closely. For this reason, we now routinely print sample images from the cameras we test on our Canon i9900 studio printer, and on the Canon iP5000 here in the office. See the Canon i9900 review for details on that model.
